

The Leader in Light-Directed Order Fulfillment Execution Solutions.

Done Right. At the Speed of Light.

Lightning Pick is the leading provider of pick-to-light, put-to-light, batch picking carts and other light-directed material handling systems in North America. Top brands worldwide leverage our best-in-class solutions to drive speed, accuracy and cost efficiency across high-performance supply chains, from manufacturing through order fulfillment.

Industries Served

- Automotive
- Computers and electronics
- Cosmetics and beauty
- Direct marketing
- E-commerce and catalog
- Food and beverage
- Grocery and convenience
- Health
- Manufacturing
- Music, book and media publishing
- Pharmaceutical
- Retail
- Third-party logistics and fulfillment (3PLs)
- Vitamins and nutraceuticals
- More

Rapid Results.

40% average increase in productivity.

99.9+% accuracy level.

50% average reduction in labor costs.

Increased capacity.

Improved material flow and throughput.

Superior customer service.

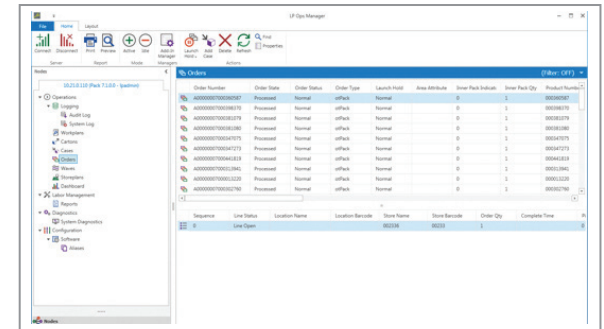

Brilliant Execution.

Lightning Pick Software

Lightning Pick order fulfillment execution software provides complete system control for total process optimization. Quickly add products and locations, change staffing and work zones, expedite hot orders, access real-time productivity statistics, verify order volumes and monitor all system activities.

A Microsoft ISV Partner, Lightning Pick software is built on the most advanced and reliable platforms to deliver superior visibility and decision-making support with LP Dashboard and LP Mobile.

Illuminating Design.

Lightning Pick Hardware

Lightning Pick's proven hardware architecture is used across hundreds of applications worldwide. Our reliable and flexible platform enables fast and easy system installation, maintenance, reconfiguration (re-slotting) and expansion. Convenient mounting — onto existing rack, shelving, workstations, or other material storage media — also reduces installation time and costs.

Our deep catalog of fully interoperable light modules is based on this powerful and agile core technology. From flat or curved surfaces to a wide spectrum of advanced features and options, Lightning Pick will meet your unique application requirements.

Products & Applications

Pick-to-Light for Order Fulfillment

Piece Picking

LP PICK is the fastest operator-based technology for broken case quantity order picking. Light displays — mounted to new or existing gravity flow rack, shelving or other storage media — illuminate to direct pickers to the correct product locations and quantities required for an order. LP PICK supports popular picking techniques including team-based zone picking, cluster picking and more.

Pick-to-Light for Manufacturing

Parts Picking, Kitting and Assembly

Lightning Pick manufacturing solutions drive quality throughout parts picking, kitting, assembly and other lean material handling tasks. Offered in a variety of options to best fit your production environment, all Lightning Pick error-proofing systems increase efficiency over paper-based methods.

Put-to-Light

E-Commerce Order Fulfillment

Quickly scan and sort items from batch picked containers of mixed SKU merchandise into individual e-commerce customer orders with LP PUT. Lightning Pick's put walls, put stations and other sortation systems increase throughput and capacity within direct-to-consumer order fulfillment operations.

Striking Solutions.

Pack-to-Light

Retail Store Replenishment

LP PACK is ideal for cross-docking operations where a percentage of merchandise requires broken case handling. Lightning Pick's highly sophisticated put-to-store solution is specifically engineered to improve product flow in distribution centers supporting retail store locations. Full cases of merchandise are scanned, and lights corresponding to specific store cartons illuminate to direct the correct sortation quantities.

Picking Carts

Mobile Batch Picking System

Lightning Pick's automated picking carts optimize e-commerce fulfillment, third-party fulfillment or any batch picking operation by reducing walking/travel time for improved pick rates and order accuracy. RF and put-to-light technologies can be applied to virtually any size or style cart that best fits your application. LP CART solutions also offer options for on-board printers, various battery choices and other productivity enhancers.

Complementary Applications

Order Finishing Systems and More

Complementary, fully integrated Lightning Pick picking technologies and automation solutions increase productivity across multiple fulfillment processes. These include container routing, RF picking, QC workstations, print and apply labeling, automatic bag and box filling, automatic weight check, automatic insertion of packing slips and collateral, and more.
