

MW SERIES DEVICES

Lightning Pick Hardware for Pick-to-Light Solutions

Maximum Performance

MW Series is the state-of-the-art hardware platform for Lightning Pick, Matthews Automation Solutions' best-of-breed product for light-directed technologies.

New and existing Lightning Pick system users can leverage MW's reliability, flexibility and energy efficiency for their pick-to-light, put-to-light, picking carts and other applications to achieve peak operational performance.

Special Features

- ▶ Open channel, easy to mount and reconfigure design
- ▶ Full protection light module enclosures
- ▶ Green construction with recyclable materials
- ▶ 100% compatible with existing Lightning Pick systems including Pick-MAX
- ▶ Heavy-duty extruded aluminum duct

MW Series Pick-to-Light Hardware

Proven Pick-to-Light Hardware Platform

The MW Series hardware is easy to install and reconfigure to accommodate changing pick faces. The duct-channel-style modules snap into and out of heavy-duty extruded aluminum open channels that are secured to racks or shelves.

Both power and data are routed to the MW module via Lightning Pick's patented Twin Wire (TW) cable. Due to its durable construction, the cable can be strung in a continuous path from shelf-to-shelf without connectors. This saves both time and cost in installation, as well as eliminates possible failure points. Because of its robust structure, the cable does not need to be protected by an additional channel faceplate, saving cost and materials.

At the end of its useful life, the system's duct channels and cable easily separate for recycling.

Refined Light Device Design

The MW light's fully-enclosed bezel protects it from debris. The black finish conceals normal dirt, smudges and other marks typical of regular use in a warehouse environment. Further, the finish accentuates the contrast between the illuminated quantity displays and domed light/confirm button against the dark background.

Flexible and Easy Module Management

As with all Lightning Pick pick-to-light modules, MW Series lights operate independently—making system installation, reconfiguration, maintenance and expansion fast, easy and affordable.

Hardware Upgrade Path

The high performance MW Series provides a clear and advantageous hardware upgrade path for current Lightning Pick customers, including Pick-MAX hardware.

Flexible, Easy and Durable Duct System

MW2040PR: 4-Digit Display, Red Domed LED Light/Confirm Button

MW2040PRG-22: 2x2-Digit Display, Red/Green Domed LED Light/Confirm Button for Dual Location Applications

Let's talk about your application.
