

LP MOBILE APP

Lightning Pick Software Android App

Total Visibility, Remote Control

The Lightning Pick mobile app provides users with real-time productivity views, operations management controls, and system diagnostics through their smart phones and tablets.

LP Mobile is a web application, compatible across all Android platforms.

The mobile app creates a competitive advantage by keeping managers connected to Lightning Pick's pick-to-light, put-to-light (put walls) or pack-to-light systems, even when not in close physical proximity to either the work area or a Lightning Pick software workstation.

The app also offers managers real-time dashboard-style updates on their Lightning Pick-controlled operations including pick rates, area overview, order progress and other facility statistics right through their phones.

Special Features

- ▶ View Facility productivity like Pick/Put Rate, Order Progress, Area Overview and other Facility data
- ▶ Manage your pick operations such as Work Plans, Employee Login/Logout, Order Details, Box Contents and more
- ▶ Run System Diagnostics for areas of the pick or put operation

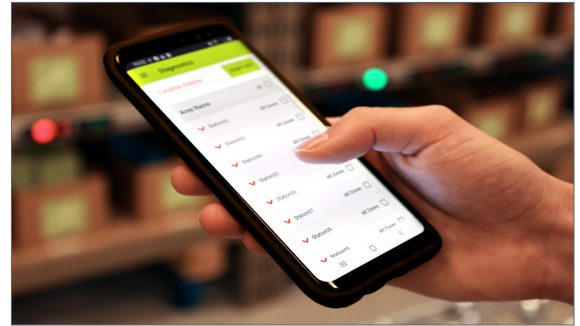

LP Mobile

Lightning Pick to Light Mobile App

Extended Capabilities

In addition to Key Performance Indicator (KPI) views, LP Mobile allows managers to execute operational changes through their phones for continued optimization. Users can change work plans, log employees in or out of the system and examine order details or box contents with the appropriate order number or bar code label.

The app can also run system diagnostics within specific areas of the pick or put operations to find any errors.

About Matthews

Matthews Automation's best-of-breed product for light-directed technologies, Lightning Pick, is the number one installed pick-to-light system in North America. Our pick-to-light, put-to-light, pack-to-light, pick carts and other solutions optimize material handling processes — from manufacturing through order fulfillment.

Let's talk about your application.
